Contribution Guide

Project

QuickServe - Restaurant Takeaway Ordering System

Purpose of This Document

This file defines how project work is split between the two contributors, Siddhant and Prakash, and how both contributors coordinate implementation, testing, reviews, and releases.

Contributors

- Siddhant
- Prakash

Contribution Model

The project follows a feature ownership model with shared review responsibility:

- Each contributor owns specific modules end-to-end.
- Each pull request requires at least one review from the other contributor.
- Shared files and cross-cutting changes require joint alignment before merge.

Ownership Split

Siddhant - Customer Experience and Frontend Flows

Primary ownership:

- Landing and public experience:
  - `src/pages/LandingPage.jsx`
  - `src/components/Navbar.jsx`
  - `src/components/Hero.jsx`
  - `src/components/Features.jsx`
  - `src/components/HowItWorks.jsx`
  - `src/components/FAQ.jsx`
  - `src/components/Testimonials.jsx`
  - `src/components/Footer.jsx`
- Customer ordering flow:
  - `src/pages/customer/RegisterPage.jsx`
  - `src/pages/customer/MenuPage.jsx`
  - `src/pages/customer/CartPage.jsx`
  - `src/pages/customer/CheckoutPage.jsx`
  - `src/pages/customer/OrderTrackingPage.jsx`
  - `src/components/customer/CustomerNavbar.jsx`

- Customer UX quality:
  - Mobile responsiveness for customer pages
  - Visual consistency and interaction polish
  - Empty/error/loading states for customer journey

Secondary/shared responsibility:

- Functional review for dashboard changes impacting customer flow
- Basic regression checks across routing and navigation

Prakash - Dashboard, State, and Product Documentation

Primary ownership:

- Admin and dashboard flow:
  - `src/pages/Login.jsx`
  - `src/pages/dashboard/DashboardLayout.jsx`
  - `src/pages/dashboard/LiveOrders.jsx`
  - `src/pages/dashboard/MenuManagement.jsx`
  - `src/pages/dashboard/Analytics.jsx`
  - `src/pages/dashboard/Customers.jsx`
  - `src/pages/dashboard/Settings.jsx`
  - `src/components/dashboard/Sidebar.jsx`
  - `src/components/dashboard/Topbar.jsx`
  - `src/styles/dashboard.css`
- Shared state and app wiring:
  - `src/context/CartContext.jsx`
  - `src/App.jsx`
  - `src/main.jsx`
- Documentation ownership:
  - `README.md`
  - `AI_Restaurant_Takeaway_System_SRS.md`
  - `CONTRIBUTION.md`

Secondary/shared responsibility:

- Functional review for customer checkout and order tracking logic
- Data consistency review across mock datasets and dashboard metrics

Shared Responsibilities

Both Siddhant and Prakash are jointly responsible for:

- Code quality and maintainability
- Pull request review and approval
- Consistent naming and folder structure
- Build and lint pass before merge
- Release notes and milestone updates

Branching Strategy

- `main` is the stable branch.
- Contributors should not commit directly to `main`.
- Use feature branches:
  - Siddhant: `feature/sid-<feature-name>`
  - Prakash: `feature/pra-<feature-name>`
- For urgent fixes:
  - `hotfix/sid-<issue>`
  - `hotfix/pra-<issue>`

Commit Convention

Use clear, scoped commit messages:

- `feat(customer): add sticky cart CTA in menu page`
- `fix(dashboard): correct order status transition bug`
- `docs(readme): update route map and setup steps`
- `refactor(context): simplify cart total calculation`
- `style(ui): improve mobile spacing for checkout form`

Pull Request Rules

Every PR should include:

- Clear summary of change
- Screenshots/GIF for UI changes
- Files/modules touched
- Testing notes
- Any known limitations

PR approval policy:

- Siddhant PRs are reviewed by Prakash
- Prakash PRs are reviewed by Siddhant
- Shared core file changes require explicit sign-off from both

Testing and Validation Checklist

Before opening a PR, contributors should verify:

- `npm run lint` passes
- `npm run build` succeeds
- Navigation and routes work as expected
- No console errors in changed flows
- UI remains responsive on desktop and mobile

Customer flow checks:

- Menu filtering and search

- Add/remove cart items
- Checkout submission and order redirection
- Order tracking status progression

Dashboard checks:

- Sidebar navigation and nested routes
- Live order status updates
- Chart rendering in analytics
- Customer table sorting/filtering
- Settings updates and save interaction

Conflict Resolution

If both contributors need to edit the same module:

- Align in advance on scope and sequence
- Split work by subcomponents where possible
- Rebase feature branches frequently
- Resolve conflicts together in a short sync

If technical disagreement occurs:

- Compare options based on readability, maintainability, and user impact
- Prefer the simpler solution that fits existing architecture
- Record final decision in PR discussion

Handoff Process

When handing work from one contributor to the other, include:

- Current implementation status
- Pending tasks
- Known issues
- Test scenarios completed
- Required follow-up steps

Recommended handoff format:

- Module:
- Completed:
- Remaining:
- Risks:
- Reviewer focus points:

Release Workflow

For each release cycle:

1. Freeze new feature merges near release deadline.

2. Run lint/build validation on latest `main`.
3. Perform smoke test of customer and dashboard flows.
4. Update `README.md` if behavior changed.
5. Tag release version after final verification.

Current Split Summary (Quick View)

- Siddhant: Customer-facing experience and ordering journey
- Prakash: Dashboard, app wiring/state, and project documentation
- Both: Review, quality checks, and release readiness

Maintainers

- Siddhant
- Prakash
